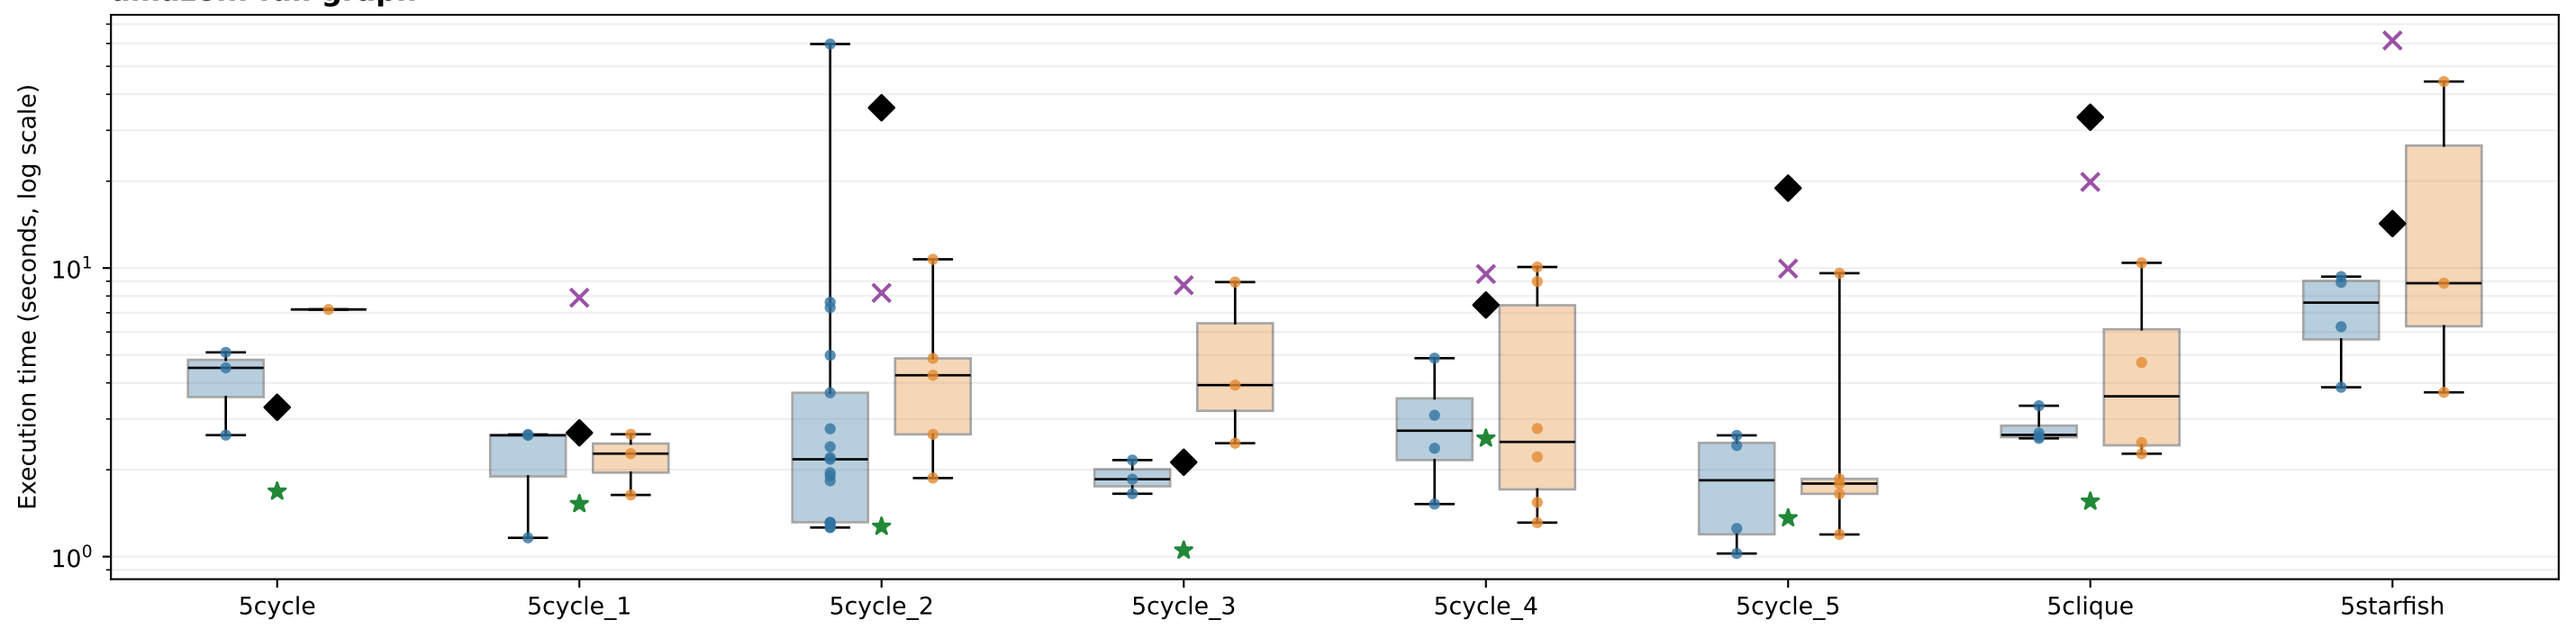
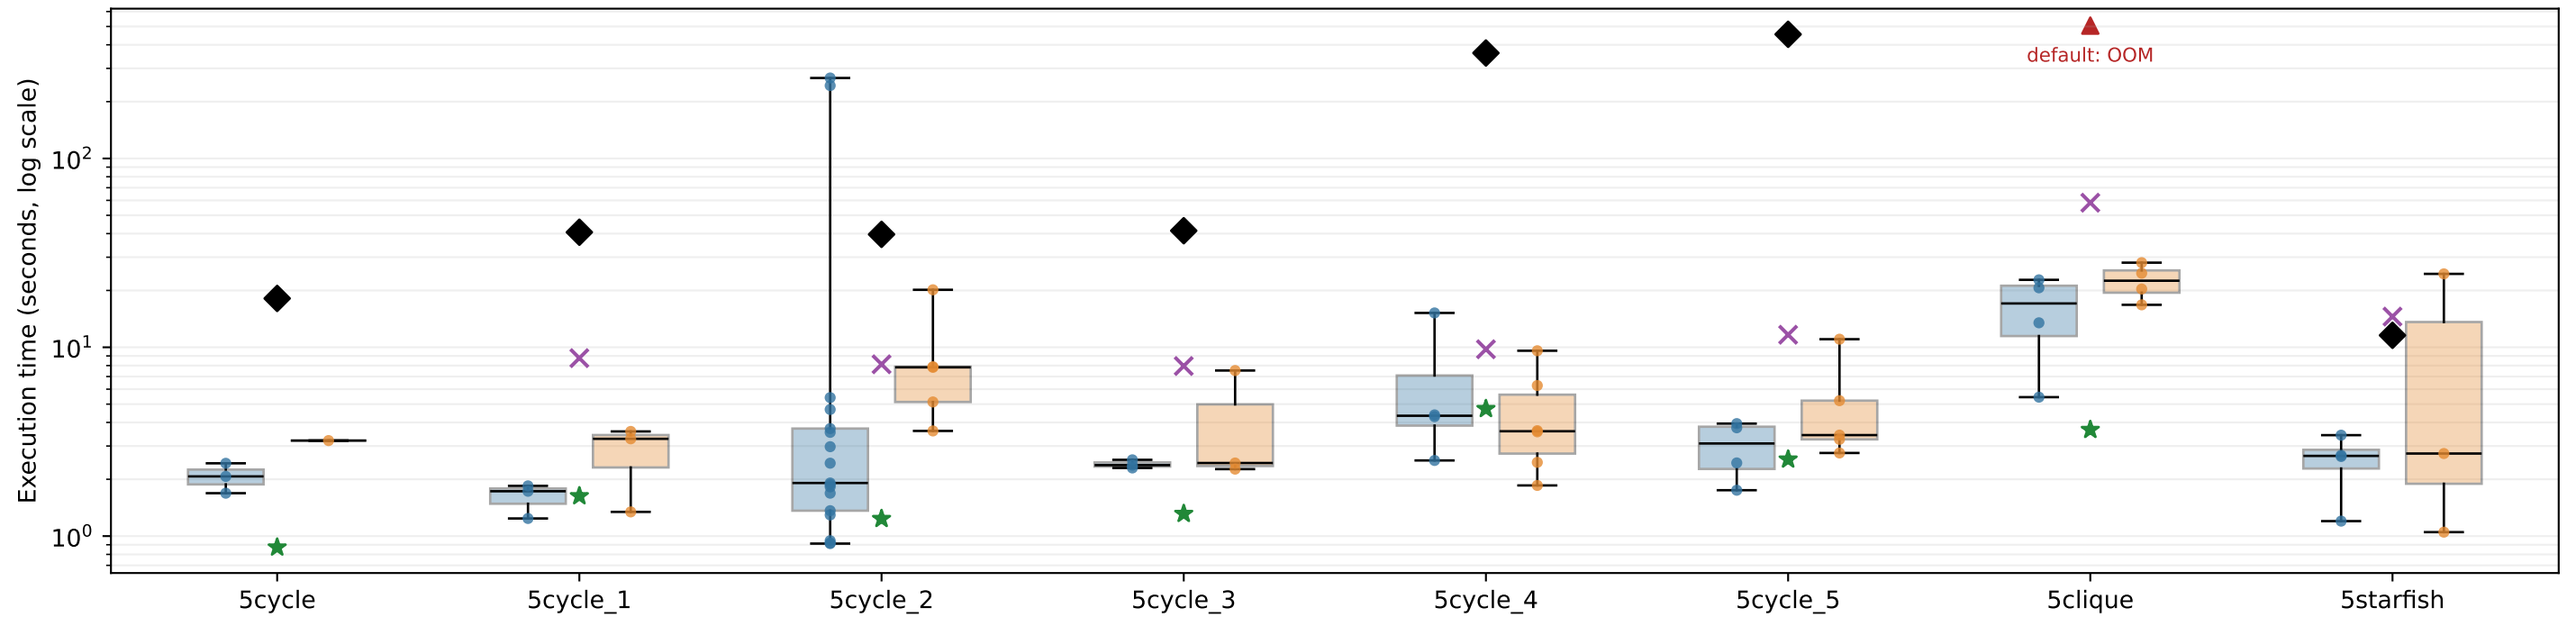
Upstream hand-selected workload, ordered WITH SQL backend

Split/hybrid plans (h*) | Binary plans (b*) | Default DuckDB CQ | Translated upstream baseline | Fixed-order one-rule plan | Failed run (top marker)

amazon: full graph



berkstan: 30% vertices; starfish: 15% vertices



DuckDB 1.3.0; 64 threads; seed=42; 1 execution(s)/plan; timeout=600s; memory=220GB; spilling disabled.
Boxes show spread across plans. Input loading excluded; degree/routing included.
Failure triangles sit at the top of the panel and do not represent a runtime.
